

CASE STUDY

How do you tackle peak season with an aging fleet?

“With the support of Big Truck Rental, we improved overall uptime, reduced our maintenance costs, and scaled our fleet to meet the demands of our seasonal cleanup.”

- Brian Steinkamp

THE CHALLENGE

Republic Services in Indianapolis began accessing their older inventory in preparation for leaf cleanup and had concerns due to the age of the fleet, risk of unexpected major component failures, and the ability to provide top-notch customer service. After reviewing their fleet, they identified \$54,000 in repairs to get their trucks prepared for leaf cleanup.

THE SOLUTION

Republic chose to partner with Big Truck Rental, who deployed 15 rear load trucks for this seasonal cleanup. Leveraging these rental trucks, Republic was able to improve their tonnage by over 900 tons in the first two weeks. Due to the improved performance, Republic was able to return 7 trucks 2 weeks earlier than they had expected.

THE RESULT

Republic Services was able to utilize Big Truck Rental's fleet to manage maintenance costs, improve productivity, and gain flexibility to scale the fleet as volumes decreased throughout the cleanup period.

The fleet generated a total savings of

\$23,959.10

that was over and above the rental costs and transport.
